The Sensitive Anemometer

CASELLA
LONDON

for measuring close to ground air flow

AN ESSENTIAL INSTRUMENT IN THE STUDY OF PLANT ENVIRONMENT

Based on the anemometer originally designed by Professor P. A. Sheppard this instrument has features which, in addition to meteorology, make it ideal for measuring low omni-directional airflow in the study of plant environment at agricultural, horticultural and forestry research stations. These features include

- ★ **Low starting speed** - 0·3 feet (0·1 m) per second
- ★ **Range** 0·3 to 50 ft/sec (0·1 to 15 m/sec)
- ★ **Linear calibration** in feet and metres per second
- ★ **Near freedom from over estimation in gusts**
- ★ **Robust construction**
- ★ **Remote indication** on battery powered units
- ★ Write for leaflet 933/1
